

---

The world of embroidery is huge, with literally thousands of choices out there. It can be overwhelming to start out, but don't worry—we've got you covered! A great place to start is learning about what type of materials are available. From most expensive to least expensive, here are the top ten materials for beginners.

- 10) Polyester The cheapest option that doesn't sacrifice its durability is the ever-popular polyester which is used by makers all over. However, it can be quite difficult when trying to come up with patterns in this particular medium because it's so easy for designs to "run." If using polyester, just focus on one color at a time and keep your designs simple.
- 9) Spandex Spandex is made for garments, but it can be used to embroider as well. It's great if you want something really stretchy that will move with the body, although spandex is not the best option for beginners because it can be tough to work with. Even though spandex is one of the most common materials used in dance garments, there are still some issues when it comes to sewing with it. The "stickiness" of this cloth makes it hard to keep stitches straight at times. I also find that they are prone to snagging, which can make sewing more frustrating if you are trying to complete a project on deadline. This is definitely my least favorite material.
- 8) Thick Heat-set Polyester The next thing on our list of cheapest materials is the thick heat-set polyester which is made to withstand wrinkles, wrinkles, and more wrinkles. This material can be quite difficult to work with, but it's good for beginners because it's durable and sturdy. Many first-time sewers choose this polyester as their first choice because it is easier to handle than spandex. This material doesn't unravel like spandex does either, which makes it a great choice for sewing clothes or accessories like bags or purses. Overall, this is the best material for beginners because it's durable and won't shed like regular cotton can.
- 7) Knit Yarn Only one thing comes to mind when you hear knit yarn—clothing! While knitting can definitely be used to create other items, it's really just used for making clothes by itself. The same goes for embroidery, but since yarn is so easy to work with it can be a great choice for beginners who want to start out with something that doesn't require a lot of effort. It may not be the best choice for someone who wants to sew their own clothes wholesale because you can't wash these materials easily. However, it's a great option for hand-embroidered clothing because it won't shed or stretch out.
- 6) Polyester Blends Now that we have cotton and spandex out of the way, let's talk about polyester blends. This is another type of polyester, but it's made with synthetic fibers so you can use it with all the other materials listed here except for heat-set polyester. It's not as fragile as heat-set polyester so you can use this one with more complicated designs. If you're just starting out, I recommend using blends with designs that are simple shapes.
